VOLUMES ON THE NEW SILK ROAD

For the first time in over a decade of stable and continuous growth, rail freight traffic between China and Europe is experiencing a period of stagnation. In the first half of 2022, freight trains trips between China and Europe witnessed a 2 per cent increase, while the amount of TEUs carried rose by 2.6 per cent.

ANNUAL INCREASE (%) OF TEUs AND FREIGHT TRAIN TRIPS BETWEEN CHINA AND EUROPE

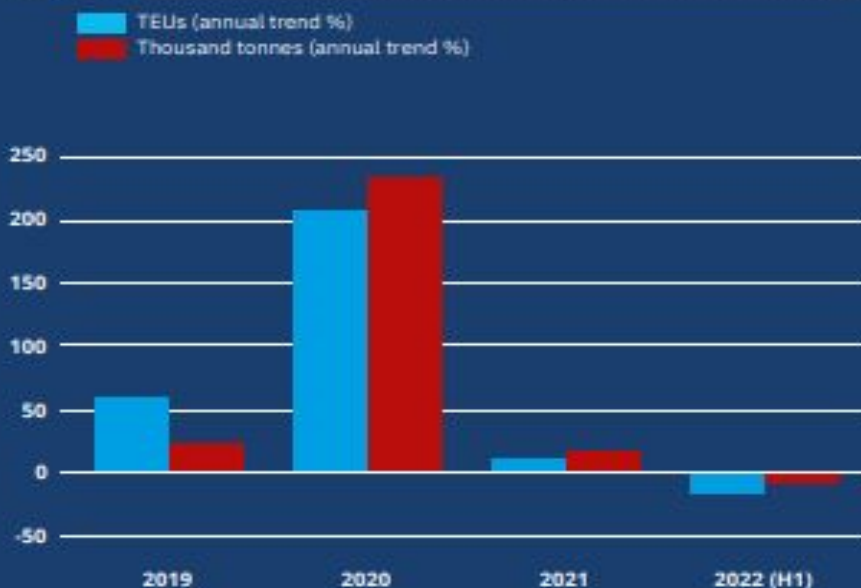

POSSIBLE CONSEQUENCES:

- The consequences of the war in Ukraine and opening new routes that do not require to pass through Russia and Belarus
- The weakening economic climate, namely lower consumption
- Companies going back to shipping goods via sea
- The sanctions on Russia by the EU and the increase in the costs of transportation

What's needed ?

Siemianówka ●

Małaszewicze ●

Gateway of Europe

Strengths

- Current main route
- Fleet of trucks
- Potential

Opportunities

- Transit time
- Flexible operations
- Capacity increase

Weaknesses

- Backlogs
- Misinformation
- Time

Threats

- Ocean freight
- Energy demand
- Alternative routes

An aerial photograph of a freight train curving through a desert landscape. The train consists of several orange locomotives pulling a long line of blue intermodal containers. The tracks are visible as a series of parallel lines curving through the arid, scrubby terrain. The text "What is the future of New Silk Road for Poland?" is overlaid in white on the center of the image.

**What is the future of New
Silk Road for Poland?**
